

Danfoss

Danfoss Socla
Valves and flow control solutions

WATER

Our natural resources of water are not inexhaustible. This collective observation now an issue for our planet influences, and will influence, our individual behaviour more and more. It is now crucial to manage water whatever its final vocation: agricultural, industrial or domestic.

OUR BUSINESS

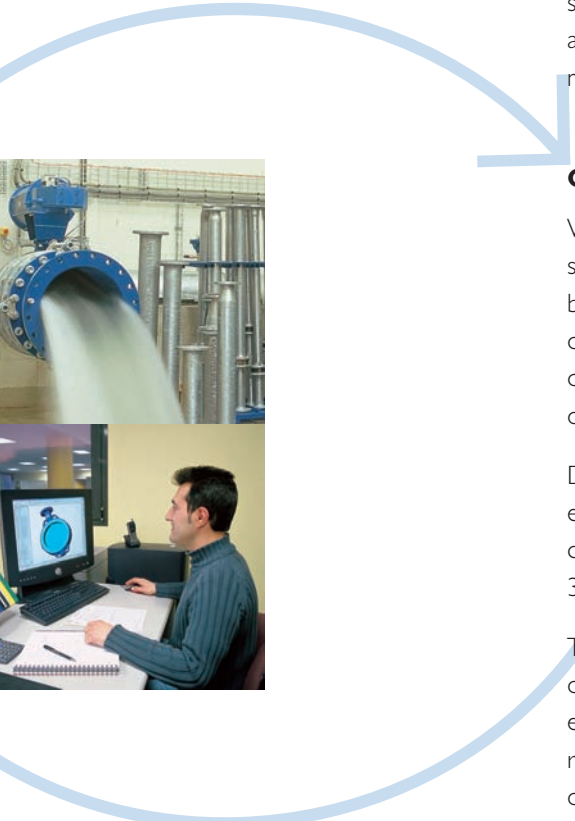

Our mission is to take part in the recovery, storage, treatment and distribution of water in irreproachable conditions of safety and respect of the environment at all times and on all levels. Our skills combine effectively and permanently the management & control of moving fluids.

OUR EXPERTISE

We design, manufacture and distribute, all over the world, a specialised range of self-acting and actuated valves to serve a broad range of applications in the field of water and the control of moving fluids. We anticipate the needs and expectations of our customers, both in new technology and logistics, in order to offer a constant service for their projects in this sensitive area.

Danfoss Socla combines its clients' requirements, the expectations of authorities in health, hygiene and sustainable development in a single quality control system, certified to the 3 standards ISO 9001, ISO 14001 and OHSAS 18001.

Taking the environment into account in the conception of our products (eco-conception) allows us to improve their ecological qualities by limiting the consumption of natural resources and optimising the impact on the environment and on human health throughout their lifespan.

PROTECTION

Protection with backflow preventer and systems to protect drinking water networks against backflow which may be polluted; pressure reducers and water meters.

NON-RETURN

Non-return with an incomparable range of check valves from 15 to 800 mm diameter using 12 different dosing systems.

REGULATION

Regulation with automatic control valves, foot valves and anti-water-hammer valves designed to control pressure, flow or level of water and air in drinking water distribution networks; and a complete range of pressure reducers

ON/OFF

A complete range of butterfly and ball valves.

Danfoss Socla : Your partner in

HEATING AND AIR CONDITIONING

Heating and air conditioning installations require optimum systems to ensure the best energy efficiency. True to its quality commitments Danfoss Socla offers a wide choice of butterfly valves, check valves, backflow preventers and accessories...

PUMPING / PRODUCTION / STORAGE

Pumping, production and storage are important stages in water's cycle. In these particular fields, Danfoss Socla's expertise is incomparable : foot valves, control valves, non-return valves...

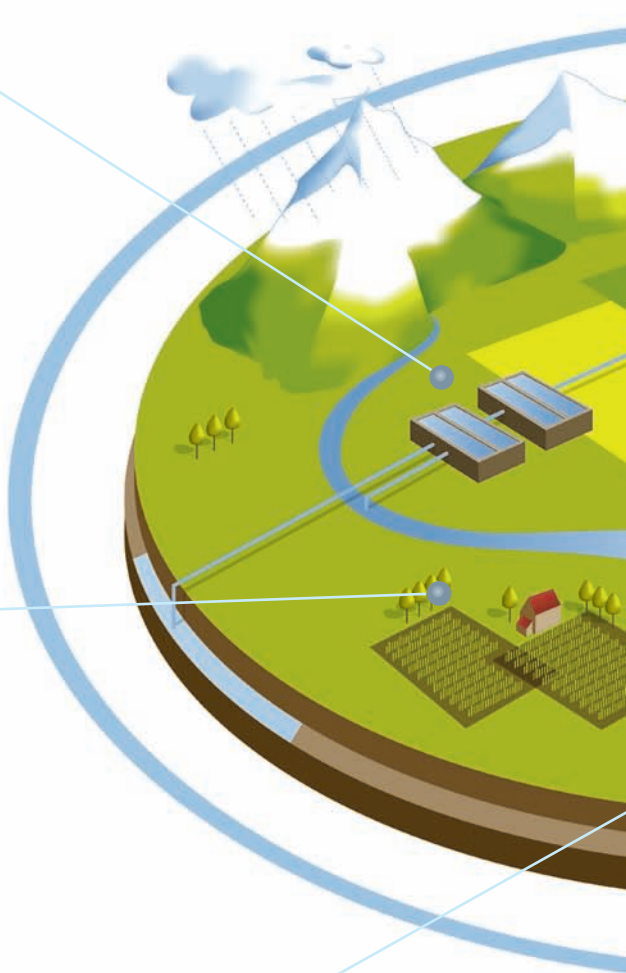

IRRIGATION

Modern agriculture requires effective and controlled irrigation. With this ambitious aim, Danfoss Socla offers a range of suitable solutions: control valves, non-return valves, butterfly valves...

TREATMENT/ RECYCLING

Procedures for treating and recycling water are more and more complex and demanding. With its acknowledged experience, Danfoss Socla offers complete and appropriate answers : guided check valves, swing check valves, butterfly valves...

water management

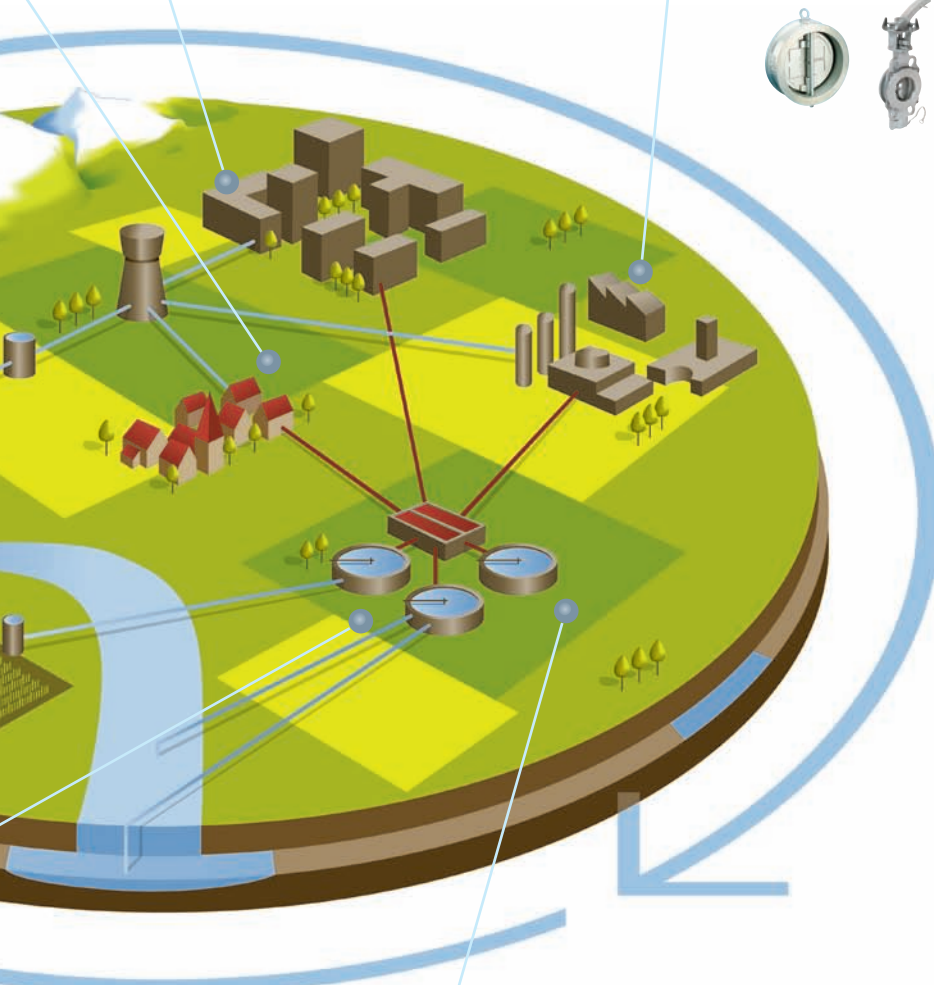

DISTRIBUTION / DRINKING WATER

To ensure the quality of drinking water distribution, Danfoss Socla has designed, using its expertise, a complete and coherent range for the protection of drinking water networks: non-return anti-pollution valves, insert check valves, pressure reducers, backflow preventers, valves with rubber membranes...

INDUSTRY

Fluid management is at the heart of the industrial world. To satisfy the need for high performance, Danfoss Socla guarantees the best technology with an incomparable package of products : butterfly valves with elastomer and plastomer liners controlled manually, pneumatically, electrically...high performance valves, guided non-return valves, swing check valves, in stainless steel, bronze...

SEWAGE

Processes for the recovery of liquid waste require reliability and robustness. In response to this problem, Danfoss Socla has designed a very wide range of ball valves (cast iron, PVC, flanged or threaded, foot valve version,...), flanged swing check valves.

OUR SITES

Based around Hubs (USA, EUROPE & ASIA), our teams work closely with our customers in order to provide the very best quality service locally throughout the world.
